

Get Ready for Spring!

Tip of the Month:

When mowing your lawn, mow in a different direction every week. This way you won't develop ruts in the soil from following the same path and the grass texture is helped when mowed from different directions.

Ready To Use Your Outdoor Equipment?

As the weather turns, we all look outside and realize that the time has come; we are going to have to drag out our lawn equipment & get it up and running! Below are some basic guidelines to preparing your equipment after it has been store for the winter.

1. Properly discard any & all gas that sat in the gas can(s) over the winter.
2. Charge the batteries on anything that has an electric start. This will keep it from straining the charging system on small engines.

3. Look for small animal nests in & around the engine compartments.
4. Did you winterize your equipment? If not, you may need a full tune up: oil change, belt checks, clean air filters, etc. It is important to keep your equipment clean & unplugged so that it does not over heat.
5. When using your equipment for the first time this season, initially take it easy.

There are also a few reminders regarding fuel, fuel additives/mixers & fuel stabilizers.

1. **Fuel: Ethanol is the enemy!** It draws moisture into the fuel tank, causing the gas to have water in it. This will plug up the fuel systems in small engines.
2. **Fuel Additives/Mixers:** Make sure to use a FD rated oil mixture in your 2-stroke engines.
3. **Fuel Stabilizers:** Absolutely necessary with the ethanol Induced fuel. This will allow your fuel to last longer than 30 days in your machines & cans.
